

NOV. 1997 – FEB. 2003
IS IT TIME TO REPOSSESSED "MOTHER EARTH"?

Why do we persist on eradicating our environment and exterminate all forms of life on earth? Are we manufacturing a disaster while melting the poles? Should we raise emission levels? Can we reset green house effects? Do we need automobiles with muffler systems venting into the atmosphere? Is EL NIÑO and LA NIÑA here for good? Has the radiation from previous atomic bomb testing neutralized yet or will they radiate forever? Why didn't we develop the hydrogen bomb or did the United Nations and Red Cross put a stop to it? Do we really need hydrogen gas automobiles and service stations? Won't they blow up just like a shuttle? Will alternate fuels produce unwanted heat? Is there a need to burn gasoline in vehicles to accelerate the destruction of our PLANET?

Why give up Mother Earth after only 511 year since Christopher Columbus brought us together. Certainly if global warming is just a big commercial hype then let me introduce a creation which is what the people here on our planet earth have been trying to invent for the past 100 years. I am positive that we are ready for a new technology that produces motive power for transportation without the use of gasoline; it also generates electricity for homes.

This is a prime mover for automobiles here on earth and an APU for outer space. I can honestly and proudly say that just as the day the patent office issued the patent, No. 5,689,174 dated Nov. 18, 1997 that it is a sound, novel and grand invention called "ELECTRICAL POWER SYSTEM"

COPIES SENT TO: My nation with the N I H syndrome "Not Invented Here", does not want to hear about it, and will keep it secret and away from its citizens until the patent expires and the technology is available for free. WHY? www.uspto.gov. and enter patent No.

The president just proposed a plan encouraging businesses to cut pollution and develop more energy efficient technology. Perhaps America has the technology and can make a big contribution to the Kyoto Japan agreement and align with other nations to find a solution. The EPA of the State of California requested that the invention be developed by the inventor using his own matching funds to a federal grant. The request is consider impossible and the inventor does not have funds for development. What ever happened to the courtesy and age old (LICENSING) by the developer (licensee) and manufacturer, a favorite with inventors.

Help was requested but denied by President Clinton ,Lawton Chiles Governor of the state of Florida also Jeb Bush and Bruce Lehman, commissioner of the P T O. patent and trademark office plus all of the above known officials and dignitaries except (POS.)

Should American and the rest of the world continue to pay such exorbitant prices for gasoline and at the same time afford the astronomical cost for research and development for new ideas just so we may invent a technology that is already available and patented? The adjective UNITED in front of the noun STATES should be replaced to show just how divided we really are. We shall for ever repeat the heavenly exclamation "GOD BLESS AMERICA". It is our only logical union and we need It. Let us unite again and free ourselves from the dictatorship of the oil producing nations that insist on controlling our lives, environment and destroy MOTHER EARTH in the name of technology for profit. Should we travel in a vehicle powered by hydrogen?

After all "Shuttles" do blow up just as well.
